Taxi Management Software | For Taxi Companies

TaxiMobility provides taxi businesses an online marketplace for their services through an application that is designed to meet the demands of potential customers and much more. Get your head high on technological advancements with an intelligent dispatching suite. It encompasses the following panels and apps for an improved business efficiency:

ADMIN PANEL

DISPATCHER PANEL

DRIVER APP

PASSENGER APP

TaxiMobility™

Taxi Management Software | What It Has...

- A dynamic white-label solution with separate mobile apps for passengers and drivers
- Highly responsive and intuitive user interface design
- Passengers provided with the facility to log in through Facebook account
- Multi-language supporting apps for a wider reach
- Integrated Google Map feature with live tracking of vehicle movements
- Extensive admin panel to manage multiple companies and dispatchers
- No requirement of extra hardware or equipment
- Supports 2G, 3G, and above
- Integrated payment gateways for easy online payments
- E-receipts on payment confirmation
- Saves taxi companies 99% manpower and time on dispatching process
- Automatic logout of idle or inactive sessions to improve system security
- Mapbox has been implemented as an alternative mapping platform to the Google Maps.

TaxiMobility™

Taxi Management Software | What It Has...

- With improved distance calculation algorithm, the GPS-enabled tracking system has the following advantages:
  - Passengers can track drivers and their expected time of arrival and can get real-time ride updates.
  - Drivers can find with pick-up and drop-off locations with optimized route.
  - Taxi companies can track drivers and assets.
- The Portuguese language has been added to the list of multi-language options.
- TaxiMobility and its applications are made GDPR compliant.
- SOS button has been introduced, aimed at enhancing the safety features in the software and applications.
- Geofencing has been added into the system.
- The fare calculation structure has been improvised to provide precise fare estimation to passengers.

TaxiMobility™

ADMIN PANEL

An Administrative Platform | For Business Operators

TaxiMobility provides the best-of-class dispatch system for taxi companies to keep pace with the technological advancements. It saves money and time by automating various processes.

- Total control over all taxi companies and their activities
- Perform complete CRM activities
- Options to add, assign, and manage dispatchers, drivers, and fleets based on location
- Multi-model dispatch by which a passenger can be availed with other options in vehicle types for the same fare when the requested vehicle is unavailable
- Separate login credentials to each dispatcher
- Live tracking of vehicle movements

TaxiMobility™

ADMIN PANEL
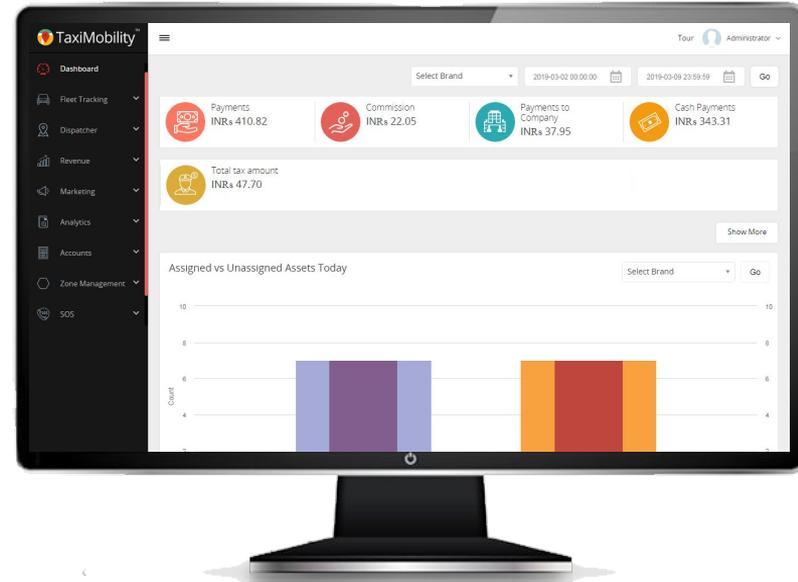

An Administrative Platform | Continued...

- Display of statistics on all companies, bookings, live dispatch, and transactions in a single platform
- Heat map with the region-wise representation of fleet availability and areas with the highest booking rate
- Marketing campaigns to send promotional emails/SMS to existing as well as new users
- Manage site settings, SMTP mail settings, SMS templates, social networking site settings, payment gateways and much more
- Dynamic SMS gateway solutions
- Use of SendGrid for all email transactions
- Add and manage drivers, driver details, driving license information and booking limits of an individual driver
- Add and manage user accounts, contacts, and content
- Manage withdrawal requests from both drivers and companies
- Create categories and segregate expenses
- Export ride statistics and transaction details

V9M3

TaxiMobility™

An Administrative Platform | Continued...

- Bulk import option to upload fleet, driver, and consumer reports from any supported file
- Customized search options to filter dashboard details
- Real-time trip updates on driver activity in the admin panel
- Option to choose between Google Maps and Foursquare API (Place Suggestion) as per preference
- Color code option to modify the UI of the front-end panel.
- Flexibility to select between auto and manual dispatch as per requirements
- The administrator can retrieve the SOS history with complete details of the emergency situations.
- An Account Settlement feature has been introduced with which you can get to know the details of payables/receivables to/from the drivers.
- Subscription fee with tax – Tax can be added separately for the subscription fee at the back end.
- Model-based commission – System has the privileges to set varied admin commission for different types of vehicle models (instead of common commission for all models).
- With Geofencing, the admin can:
    - define zones either by selecting the city or by drawing polygons in the map and
    - set fixed fare for the defined zones (city wise, zone wise, and zone to zone).

TaxiMobility™

The Dispatch Platform | For Dispatchers

Dispatch has been made seamless with TaxiMobility. The taxi drivers will no longer be idle as our fast and automated taxi dispatch system helps dispatch vehicles with no delays.

- Real-time trip updates in the dashboard

TaxiMobility™

The Booking App | For Passengers

It is a taxi-booking app for passengers to book cabs with taxi companies. This highly responsive app allows passengers not only to book taxis but also to track drivers and pay online in a few taps.

- Free iOS and Android apps
- White-label application with customizable features
- Login using a mobile number or their Facebook account
- Multiple payment options (cash/card/wallet)
- Real-time tracking of the nearest available taxis
- Two package plans: Rental (for trips within the city) and Outstation (for intercity travels)
- Fare estimation
- Notifications on booking confirmation
- Option to track driver's estimated time of arrival
- Option to track the progress of the ride in maps from the pick-up point to the destination

TaxiMobility™
Dispatching Innovation

Continue with mobile number

or Continue with Facebook

TaxiMobility™

The Booking App | Continued...

- Ride-sharing option initiated within the contact list

- Detailed history on the upcoming and previous rides with route maps

- Mandatory feature to select a valid reason for ride cancellation

- E-receipts with extensive details on distance, duration, fare, waiting time, discount and wallet balance

- Option to add drivers to Favorites and book rides with the favorite driver

- Favorites option to save address details for easy future reservations

- Feedback sharing provision to rate drivers for the services

- Option to share comments through social networking sites

- Live movement of cabs can be viewed on the home screen

- Multiple booking option for passengers to book a cab for his friend or relative

- Multi-model dispatch that avails the next high-end model for the same fare if the requested vehicle is not available at the time of booking.

  For example, a passenger is requesting a minicab. In case of the unavailability of that particular vehicle type, the passenger can go for an available sedan-type vehicle at minicab's fare.

- Integrated payment gateways for easy payment
