# TaxiMobility™

TaxiDini

Case study

Overview

TaxiDini offers a ready-to-use taxi solution for the customers to experience a comfortable and reliable ride. The app offers easy communication between passengers and drivers to ensure they reach their destination with utmost safety. It renders an easy and reliable way of taxi management to regulate the movement of taxis, monitor of the progress of each ride and track the payment transactions.

3

The Challenge

The client approached us in the requirement of a taxi booking app for easy and convenient taxi hailing. The client desired an app that would implement technology at its best to offer a taxi app that would encompass easy communication features and payment options. The client requested for a smartphone-based app to simplify the process of booking, paying, tracking, and hailing a taxi via smartphones.

The Solution

We provided a taxi hailing app that meets all the requirements of the client. The app allowed the users to order a taxi with very few taps on the app. Once the taxi is booked, the passenger gets picked from their doorstep and is dropped safely at their respective destination on time. The app is enabled with GPS to locate nearby taxis and check driver availability. The address can be auto-filled in the fields available by selecting the location on the map. The users are provided with multiple payment options and hence, made payments effortless.

The passenger can star rate the driver based on the service in order to help the company maintain their standards. Customers can also share their opinions on social media such as Facebook and Twitter. Passengers can store their favourite places and rides as they desire. In addition to having a comfortable ride, the user is provided with an automated intimation of trip fare. The fare is calculated based on the location selected by the user, and post payment, e-receipts are sent to the registered email address.

Technologies used

Web Development : PHP 5.3.3, Mysql 5.1.8

Mobile Application : Android 2.2 and above

Design/CSS : CSS, HTML

Script Languages : JavaScript and JQuery

Browsers : Internet Explorer 8.0, Firefox,Safari, Opera, Chrome

Operating System : Windows, Linux

The Results

With the app that promises high performance, the client could reach their intended business and ensure quality for their customers. They could handle any amount of data and resources managing multiple booking requests simultaneously without any difficulty.
